Online Library Geometry Special Right Triangles Quiz Answers

In geometry, special right triangles are great to work with because the ratio of their sides will always be the same, making calculations easier. The two special triangles you need to know are the isosceles (or 45-45-90) and 30-60-90 right triangles. You can use your knowledge of special right triangles to answer the following questions. [...]

trigonometric functions and the Pythagorean theorem. The most frequently studied right triangles, the special right triangles, are the 30,60,90 Triangles followed by the 45 45 90 triangles.

Special Right Triangles Formulas. 30 60 90 and 45 45 90 ...
Given: Isosceles right triangle XYZ (45° - 45° - 90° triangle)
Prove: In a 45° - 45° - 90° triangle, the hypotenuse is times the length of each leg. Because triangle XYZ is a right triangle, the side lengths must satisfy the Pythagorean theorem, $a^2 + b^2 = c^2$, which in this isosceles triangle becomes $a^2 + a^2 = c^2$. By combining like terms, $2a^2 = c^2$.

Find the missing side lengths. Leave your answers as ...
Triangles are not always right (although they are never wrong), but when they are it opens up an exciting world of possibilities. Not only are right triangles cool in their own right (pun intended), they are the basis of very important ideas in analytic geometry (the distance between two points in space) and trigonometry.
