The coolant temperature sensor plays an important role in monitoring the performance of the coolant and takes measurements of the temperature. It can help the control unit in your engine system to detect when the coolant is not functioning well and your vehicle is overheating.

Symptoms of a Bad Engine Coolant Temperature Sensor ...

A coolant temperature sensor (CTS) (also known as an ECT sensor or ECTS (engine coolant temperature sensor) is used to measure the temperature of the coolant/antifreeze mix in the cooling system, giving an indication of how much heat the engine is giving off.

What is a Coolant Temperature Sensor?

The coolant temperature sensor, also known as the coolant temperature switch, is an engine management system sensor that is used to monitor the temperature of the engine's coolant. Most coolant temperature sensors operate using electrical resistance to measure the temperature of the coolant.

The engine coolant temperature (ECT) sensor is one of the most important engine management sensors. Consequently, its readings play a key role in calculations which affect engine performance. Consequently, its readings play a key role in calculations which affect engine performance.

Engine Coolant Temperature (ECT) Sensor - Function ...

The temperature of the cooling air may range from well below freezing to 50 °C. Further, while engines in long-haul boat or rail service may operate at a steady load, road vehicles often see widely varying and quickly varying load. Thus, the cooling system is designed to vary cooling so the engine is neither too hot nor too cold.
