Supervisory control and data acquisition (SCADA) is a control system architecture comprising computers networked data communications and graphical user interfaces (GUI) for high-level process supervisory management, while also comprising other peripheral devices like programmable logic controller (PLC) and discrete Proportional Integral Differentiator (PID) controllers to interface with process ...

SCADA - Wikipedia

A control system manages, commands, directs, or regulates the behavior of other devices or systems using control loops. It can range from a single home heating controller using a thermostat controlling a domestic boiler to large industrial control systems which are used for controlling processes or machines. For continuously modulated control, a feedback controller is used to automatically ...
