Introduction Columns are usually considered as vertical structural elements, but they can be positioned in any orientation (e.g. diagonal and horizontal compression elements in a truss). Columns are used as major elements in trusses, building frames, and sub-structure supports for bridges (e.g. piers).

In packed column design the specification of liquid distributors and, generally speaking, column internals is one of the last steps. Column fluid dynamic calculations provide liquid and gas loads, column diameter, and type of packing. With these specifications available, liquid distributor design is conducted.
