psychological effects of uncertainty held to a minimum. The decision-maker does not need to engage in alternative outcome calculations or in updated probability assessments – much of that activity is performed by a mechanism: semi-automated.

The cybernetic paradigm

Cybernetics is a transdisciplinary approach for exploring regulatory systems—their structures, constraints, and possibilities. Norbert Wiener defined cybernetics in 1948 as "the scientific study of control and communication in the animal and the machine." In other words, it is the scientific study of how humans, animals and machines control and communicate with each other. Cybernetics is applicable when a system being analyzed incorporates a closed signaling loop—originally referred to ...

Decision-Making Theory: Definition, Nature and Theories

“ the science of communication and control, which has been derived from technology and which Norbert Wiener has called cybernetics is therefore a new science about an old subject. Cybernetics, the systematic study of communication and control in organisations of all kinds, is a conceptual scheme on the grand scale.

Communications Theory : Nature, Ideas and Criticism

Decision theory. Decision theory (or the theory of choice) is the study of the reasoning underlying an agent's choices. Decision theory can be broken into three branches: normative decision theory, which gives advice on how to make the best decisions, given a set of uncertain beliefs and a set of values; descriptive decision theory,...

any combination of those. Second-order cybernetics in particular studies the role of the (human) observer in the construction of models of systems and other observers.

Cybernetics and Second-Order Cybernetics

Cybernetics in General Systems Theory is defined as the study of control within a system, typically using combinations of feedback loops. This can be within machines or living structures. First order Cybernetics relates to closed systems, second order includes the observer perspective and third order looks to how these co evolve.
